GitHub: artimistic-afk

PROFESSIONAL SUMMARY

Junior Data Scientist with 1–2 years of hands-on experience in applied machine learning, statistical analysis, and data-driven product development, supported by a Master's degree in Artificial Intelligence and Data Science. Experienced in building end-to-end machine learning pipelines, predictive models, and generative AI applications using Python and SQL. Skilled in translating business problems into ML solutions, performing experimentation and model monitoring, and collaborating with cross-functional teams to deliver measurable business impact. Hands-on experience with LLM fine-tuning, RAG-based AI applications, model experimentation, and scalable ML workflows using Docker and MLflow.

EXPERIENCE

Machine Learning Analyst / Junior ML Engineer, INSIGHTHUB
Islamabad, Pakistan *Jan 2019 – Dec 2020*

- Built and validated ML models for customer analytics and recommendation systems using Python and scikit-learn, contributing to a 20% increase in user satisfaction metrics.
- Conducted EDA, feature engineering, and statistical modeling to uncover behavioral patterns and improve predictive performance across customer datasets.
- Developed NLP solutions and customer segmentation workflows, enabling targeted product recommendations and engagement strategies.
- Collaborated with product and engineering teams to translate analytical findings into actionable business improvements.

Projects

Customer Churn Prediction (XGBoost)

- Developed an end-to-end ML pipeline predicting customer churn on the Telco dataset achieving 0.89 ROC-AUC and 84% accuracy.
- Performed feature engineering, hyperparameter tuning, and persisted model artifacts using joblib for deployment-ready workflows.

Customer Support Chatbot (LLM Fine-Tuning)

- Fine-tuned DistilGPT-2 on synthetic support dialogues using PyTorch and HuggingFace Transformers for domain-specific customer support.
- Applied generation control techniques (top-p sampling, temperature scaling, no-repeat n-grams) to improve response quality.
- Built a real-time inference pipeline with a Gradio UI, demonstrating the full LLM lifecycle from data prep to deployment.

EDUCATION

MSc. Artificial Intelligence, Data Science and Digital Business

GISMA University of Applied Sciences, Potsdam, Germany *2023 – 2024*

- **Thesis:** Empowering HR Decision-Making: Leveraging Machine Learning for Accurate Job Change Prediction among Entry-Level Data Scientists.

BS. Computer Science

Iqra University, Islamabad, Pakistan *2017 – 2021*

- **Final Year Project:** Spam Detection and Fake Account Identification for Twitter

SKILLS

Programming & Automation:

- Python (scikit-learn, TensorFlow, Keras, PyTorch)
- Node.js
- Workflow Automation: n8n
- Bash

Data Analytics, Visualization & BI:

- SQL (PostgreSQL)
- BigQuery
- Power BI
- Excel
- matplotlib, seaborn

Statistics & Experimentation:

- Hypothesis Testing
- A/B Testing
- Regression Analysis
- Time-Series Analysis (Basic)

Machine Learning, GenAI & MLOps:

- XGBoost
- LLM Fine-Tuning & Prompt Engineering
- RAG-based AI Applications (Conceptual / Applied)
- Model Evaluation & Validation
- Model evaluation, validation,
- MLflow (Basic)
- Docker, Docker Compose (Basic)

Cloud, Data Platforms & Version Control:

- AWS (Foundational Knowledge)
- Azure (Foundational Knowledge)
- Data Warehousing Concepts
- Git, GitHub
